

Job Description

Senior DevOps Engineer

About us

We are a NYC-based AI company founded by two MIT PhDs. Our platform is an AI for high-precision text reading.

Our innovations in natural language processing lie at the core of a state-of-the-art NLP architecture for analyzing large collections of unstructured text. Our clients include some of the largest pharmaceutical and financial companies, as well as ad agencies that serve them. Our team is comprised of some of the world's top authorities in machine learning (ML) and NLP.

Further, you...

- Have an "automation first" mindset and are passionate about performance, stability, and security
- Believe in a proactive approach of prevention over mitigation, and mitigation over fixing
- Are comfortable with change
- Have had a positive experience working for a startup before

Required Qualifications:

- Proficient in working with Unix/Linux-based platforms
- Extensive experience in utilizing various AWS Cloud Services, including EC2, ECS, ECR, EKS, etc.
- Proficient in using DevOps tools like Ansible, Terraform, Docker, Kubernetes, Helm, etc.
- Skilled in implementing CI/CD processes and working with platforms such as Jenkins, Gitlab.
- Familiarity with software development practices, including building, unit testing, code analysis, release process, and code coverage.
- Strong problem-solving and analytical abilities.
- Proficient in scripting languages such as Bash or Python.
- Experience with monitoring tools like Zabbix, Grafana, and understanding of OpenTelemetry concepts
- Have no objections to security clearance
