

Job Description

Sr. Back End Engineer

You are interested in large-scale content aggregation, data processing, and storage. We expect you to work closely with others and provide leadership, code discipline, and project design by example. You are extremely driven and want to assume ownership over an important part of our technology to build a solid product stack. You will use your expert Java skills to design and build highload web applications and service-oriented systems for storing, processing, and searching a very large volume of unstructured text. In doing so, you will solve a wide variety of engineering challenges, ranging from data flow, to storage, to aggregation, to supporting APIs / presentation layer / data pipelines / web apps. You are comfortable with change. You've had positive experience working for a startup before.

Required Skills

- Java (5+ yr)
- Spring Framework (3+ yr)
- NoSQL & relational DBs (3+ yr)
- ElasticSearch
- Spark
- AWS
- Design Patterns
-

Responsibilities

- Implement multi-tier scalable SaaS architectures
- Design and consume RESTful web service APIs via microservices
- Debug and troubleshoot existing codebase
- Deploy to and manage apps in the cloud
-

Bonus - hands-on experience with:

- Data Streaming Pipelines
- NodeJS, Python, Scala, Neo4j
- ML, NLP, statistics
- bash/unix tools, security, caching
- Familiarity w/security patterns' best practices
